

Block-Out Disposables

Mold and Fire Remediation, Heavy Construction

Temporarily block out mold and other airborne debris from your HVAC system

Block these substances:

- **Mold**
- **Asbestos**
- **Lead Paint**
- **Fire Damaged Particulate**
- **Airborne Dust & Debris**

Know the facts.

Dangerous and undesirable amounts of airborne debris are a significant concern during indoor mold and fire remediation, asbestos removal and construction.

Block-Outs form a solid seal over vents.

The Airspace Filtration™ companies are committed to delivering innovative products and solutions which promote premium indoor air quality. By taking an active and preventative approach these products elevate and promote cleaner indoor air quality standards, conditions, and environments.

“If you are allergic to mold, or have asthma, being around mold may make your condition worse. If you have a chronic lung condition or a weak immune system, you could develop mold infections in your lungs and you should try to avoid buildings contaminated with mold.”

Block-Out Disposables are ideal to temporarily block out mold and other airborne dust and debris.

Block-Out Disposables

Block-Out Disposable

Block-Out Disposables are made from a strong, 8 mil tear-resistant vinyl, backed with a re-positionable pressure sensitive adhesive (PSA) to create an airtight vent frame seal. Block-Out Disposable is a solid piece specifically for asbestos and mold remediation. Block-Out centers are solid while our standard line of Disposables have a honeycomb cut center so you can use a filter. The solid center of Block-Outs create a more rigid seal for your protection and are OSHA Compliant.

Block-Out Disposables have the same sizes and outer dimensions of regular Disposables (check our sizing chart). Block-Outs create an aggressive airtight vent frame seal. They are designed for a fast application and can be used with a variety of vent sizes. Be prepared for any job by carrying a few sizes of Block-Outs. As long as a Block-Out covers the vent opening, you are protected. In other words, a 12" x 12" Block-Out can cover any size below that dimension.

Ideal for use in environments needing to block HVAC systems from:

- **Mold**
- **Asbestos**
- **Airborne contaminants from fire remediation**
- **Sawdust**
- **Debris from clean-up, insulation or geothermal conversion**

Save time, money and materials.

100% perfect fit, each and every time. Available in every vent grille size.

No tools required, simply peel off back and position or easily reposition.

Eliminates filter cutting, taping, trimming, and wasting expensive materials.
